Solutions that Meet Your
Specific Needs**

We Give You Custom Solutions that Meet Your Specific Needs

When you are shopping for clothes, electronics, or shoes, you don't buy just one brand, one size, and one color. Why would you do the same for your business? Your business and brand have different needs, operating capacities, and concerns than any other businesses; that is why it is important to hire a dedicated team of professionals who customize an IT solution that is mapped specifically for your company. C1P Solutions is the number one professional services provider in the US, and one meeting with our team will show you why!

How does C1P Solutions design a plan that fits your business's specific needs? The experts provide comprehensive

Professional Services and Network Design. The dedicated team actually takes the time to sit and talk with you. We want to know what it is you do, what your goals are, what your daily operations entail, what your security concerns are, and what your company needs from us for success. Designing an effective infrastructure requires a complete and comprehensive look at the business itself, not simply throwing expensive “Band-Aid solutions” at your company and hoping that they all work together.

After getting to know you, the architects present you with the best ideas and options that fulfill your company’s demands, needs, and budget concerns. Nothing is off the table. The professionals can recommend a cloud solution, an on-site setup, or a hybrid solution, which takes advantage of both remote support and in-house accommodations.

The professional team is with you through the entire process, from the planning phase to setup and 24/7 monitoring services. You and your business will never be alone to navigate through the process. In an age of automation and quick fixes without personal support, you will appreciate the special attention you deserve from C1P Solutions.

The experts will also install the infrastructure designed by the team.

C1P's Professional Services team goes in and wires the office for the network, connects all the printers, phones, computers, and additional devices your business needs to remain connected and succeed. The team designs your infrastructure with the latest security protocols and industry-specific laws and regulations your business may require to remain compliant. All of this is accomplished without contracting the work out to multiple companies, which can be pricey and result in detrimental

downtime. You will always work with the same team throughout the process. That way, as a business owner, you can focus on your business operations, not the IT stuff. Once the plan is in place, the best team in the industry backs you. You do not have to worry about security threats, data loss, tedious backup schedules, and compliance concerns. We are always monitoring, and we're only a phone call away if you need anything.
